

Every 24 hours an employee's key must be re-validated by the Wall PD. If re-validation does not occur the key becomes inactive.

A technician has been dispatched to a remote site. CLIQ Remote sends the necessary access authorization for his key via the Mobile PD.

### About Mul-T-Lock

Mul-T-Lock® is the worldwide leader in developing, manufacturing and marketing High Security products and Access Control solutions to the residential, commercial and institutional markets, for over 40 years. Adhering to the most stringent security standards, Mul-T-Lock® products are sold via 20,000 authorized and trained service centers on every continent. ## Mul-T-Lock CLIQ Remote

Today, most facilities are very dynamic places with access control a priority. Within a single enterprise, there are multitude of access points including remote sites and locations that require varying degrees of control. With ongoing changes to access rights, personnel, additional locations and security needs, you need a High Security locking system that gives you the flexibility to make changes as they happen.

Using web-based management software, CLIQ Remote is a High Security, electromechanical locking system solution that gives you secured remote management and enhanced control over all your access points and locations. And it couldn't be easier to install and use.

### Centralized Secure Remote Management

CLIQ Remote addresses your high physical security needs with the easy-to-use remote management and control capabilities. You'll be able to respond to issues as they arise to save you time and manual intervention. Actions like granting access or disabling a key are done with several clicks of a button, which means personnel no longer need to visit the administration office for keying changes.

### Simple. Secure. Convenient.

#### CLIQ Remote

CLIQ Remote allows you to communicate with your entire locking system through micro-technology that is embedded into cylinders and keys. With it, you can conveniently manage access rights and more, directly from your computer or using the system's Programming Devices.

#### CLIQ Web Manager Software

As a web-based solution, you won't need to install any additional software. You simply sign in to the secure CLIQ Web Manager website, authenticate your Control Key and you'll be ready to control your entire CLIQ system from anywhere you are.

#### Easy and fast installation

With no wiring required at the door, you'll be able to easily deploy CLIQ Remote. In particular, when wiring is an obstacle, CLIQ Remote's unique and simple wire-free design minimizes onsite disruptions and allows you to quickly scale the solution as you add more access points.

#### Secured communication

Mul-T-Lock's CLIQ Remote was designed for complete security, both physical and electronic. Powered by trusted, field-proven technology, Microsoft SQL Server Databases together with SSL certificates, all communication between your work stations and the database remains secure and accessible only to authorized users.

### Secure Remote Control

#### Know when, where and who accessed any location

Whenever anyone uses their key, it's tracked and logged. CLIQ Remote gives you an audit trail of all access points providing you with additional security information to help ensure accountability at all times.

#### The flexibility you need

With just a few clicks you'll be able to change access rights, enable and disable keys just when you need to. CLIQ Remote also allows you to customize access schedules based on your business needs and personnel requirements.

#### Remote management combined with High Security

CLIQ Remote allows you to send authorizations to remote locations and receive audit trails from them without ever leaving the office. When an unplanned event occurs, you can address it as it happens and on-the-go with the Remote Programming Device or right from your computer.

#### Add access control anywhere

Security and access control can be necessary even in locations where wiring or alterations are impossible — as is the case of heritage or older buildings. Wire-free CLIQ Remote gives you the ability to control access in multiple formats, cylinders and padlocks, and in any location.

#### Revalidation feature reduces risk

CLIQ Remote's new Revalidation feature reduces risk when keys are lost or when personnel changes over. You'll be able to instruct the system to require revalidation from any key based on a set time schedule. This gives you the ability to provide time-limited access, and view exactly when a key is revalidated through the audit trail.

#### Intuitive and easy-to-learn software

Designed for simplicity, CLIQ Remote is easy-to-program and easy-to-operate. While the solution is very intuitive and user friendly, Mul-T-Lock offers a concise training program, allowing you to master the solution's features and capabilities immediately.
